## Features and Application

MIL-DTL-38999 Series I is a bayonet coupling subminiature configuration with high contact density, ideal for smaller wire gauge, general-purpose applications. These environmentresisting connectors are 100\% "scoop-proof." Pins are recessed in elongated shells to prevent the possibility of bending contacts when plugs are scooped into the mating receptacles.

This family of connectors is offered in 5 receptacle-mounting styles. They include square flange receptacles, for both front and rear panel (wall) mounting; square flange receptacles, for both front and rear box mounting; and jam nut receptacles which incorporate "O" ring seals, designed for rear panel " D " hole mounting.

Standard plugs provide RFI protection by incorporating a continuous strip of attached grounding fingers attenuating interference up to 1 GHz .

Fifty-seven insert arrangements per MIL-STD-1560 are tooled and qualified to MIL-DTL-38999 Series I, utilizing 2 to 128 contacts. Contacts come in sizes $22 \mathrm{M}, 22 \mathrm{D}, 20,16$, 12, and 8 (coax and twinax), terminating wire sizes from 28 gauge to 12 gauge including coaxial cable.

These connectors are available in wide range of shell materials and finishes. Aluminum shells are offered in electroless nickel, olive drab cadmium and bright cadmium. Other finishes such as anodic and zinc nickel are available upon request to commercial callouts only. In addition, we offer passivated stainless steel shells with standard environment-resisting inserts (commercial callouts only), and for highly corrosive environments, nickel-aluminum-bronze shells with standard environment-resisting inserts (commercial callouts only).

Universal I/R Tool - A single, expendable plastic tool is used for both insertion and removal of contacts.

Scoop-Proof Design - Recessed pins in elongated shells minimize the possibility for contact damage. In a blind mating application, mating shells cannot "scoop" the pins, and cause a shorting or bending of contacts.

Closed-Entry Socket Insert - Hard dielectric socket face has lead-in chamfers for positive alignment of pins (even partially bent within pre-established limits) with sockets.

Interfacial Pin Insert Seal - Raised moisture barriers around each pin, which mate into lead-in chamfers of hard face socket insert, provide individual contact sealing. Interfacial seal is never touched by service tools.

Elastomer Wire Sealing Grommet - Sealing over a wide range of wire diameters is assured by a triple wire seal in each cavity at the rear of the connector.

Superior Contact Stability - Rear release crimp contact system features a stamped beryllium-copper retaining clip captivated by molded-in shoulders of each contact cavity in the insulator. A rear-inserted M81969 plastic tool expands the tines beyond the shoulder, releasing the contact.

Shell Polarization - Alternate key/keyway positions prevent cross mating of adjacent connectors having identical insert arrangement.

MIL-DTL-38999
Performance Specifications

## Series I

## Performance Specifications

## Operating Temperature Range

Finish B: $-65^{\circ} \mathrm{C}$ to $+175^{\circ} \mathrm{C}\left(-85^{\circ} \mathrm{F}\right.$ to $\left.+347^{\circ} \mathrm{F}\right)$
Finish F: $-65^{\circ} \mathrm{C}$ to $+200^{\circ} \mathrm{C}\left(-85^{\circ} \mathrm{F}\right.$ to $+392^{\circ} \mathrm{F}$
Finish A: $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}\left(-85^{\circ} \mathrm{F}\right.$ to $\left.+302^{\circ} \mathrm{F}\right)$

## Material and Plating Data (Finish)

B - aluminum shell, olive drab cadmium over nickel base
F - aluminum shell, electroless nickel finish
A- aluminum shell, silver to light iridescent yellow color
(bright) cadmium over electroless nickel

## Corrosion Resistance

Finishes A and B withstand 500-hour salt spray.
Finish F withstands 48 -hour salt spray.

## Durability

Minimum of 500 mating cycles

## Environmental Seal

Wired, mated connectors with specified accessories attached, shall meet the altitude-immersion test specified in MIL-DTL-38999.

## Fluid Resistance

Connectors resist specified immersions in MIL-PRF-7808, MIL-PRF-23699, MIL-PRF-5606, M2-V Chevron oil, Coolanol 25, MIL-DTL-83133 (JP-8), MIL-DTL-5624 (JP-4, JP-5), SAE-AMS1424 Type I, and other solvents and cleaning agents.

## Shell-to-Shell Conductivity

- Finish $\mathrm{F}=1.0$ millivolt maximum potential drop
- Finishes A and $\mathrm{B}=2.5$ millivolts maximum potential drop

## Shielding Effectiveness

RFI and EMI attenuation at the specified frequencies meet the requirements of MIL-DTL-38999.

- RFI shielding effectiveness of mated connectors with RFI backshells is measured in a triaxial radio frequency leakage fixture.
- EMI shielding effectiveness is measured at the interface of mated connectors and tested by the mode-stirred technique specified in method 3008 of MIL-STD-1344.

## Shock and Vibration Requirements

Wired, mated connectors shall not be damaged, nor shall there be a current interruption longer than one microsecond when subjected to the following:

## Standard Shock

Mated connectors withstand a pulse of approximate half sine wave of $300 \mathrm{G} \pm 15$ percent magnitude with duration of $3 \pm 1$ milliseconds applied in three axes per MIL-STD-1344, method 2004.

## High Impact Shock

When mounted as specified in MIL-S-901, grade A, a drop of a 400 lb . Hammer from 1 foot, 3 feet and 5 feet applied to connector in three axes, totaling nine impacts.

## Vibration

Mated connectors, with proper accessories, withstand the following vibration levels:

- Sine Vibration per MIL-STD-202, method 204, test condition G.
- Random Vibration per MIL-STD-1344, method 205, test condition V and test condition VI, Letter "J" at ambient temperature.

## Voltage Rating

|  | Suggested Operating Voltage |  | Test Voltage | Test Voltage | Test Voltage | Test Voltage |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Service Rating | (Sea Level) |  | Sea Level | 50,000 Ft. | 70,000 Ft. | 100,000 Ft. |
|  | AC (RMS) | DC | $V$ RMS | V RMS | V RMS | V RMS |
| M | 400 | 550 | 1300 | 550 | 350 | 200 |
| N | 300 | 450 | 1000 | 400 | 260 | 200 |
| I | 600 | 850 | 1800 | 600 | 400 | 200 |
| 11 | 900 | 1250 | 2300 | 800 | 500 | 200 |

Note: The establishment of electrical safety factors is left entirely to the designer, as he is in the best position to know
exactly what peak voltages, switching currents, transients, etc., can be expected in a particular circuit.

## Military and Aero-Electric Part Number Development

Note 1: Each connector is furnished with contacts unless ordered less contacts (L/C) as follows: One spare contact for inserts requiring 1 through 26 of each contact and two spares for inserts with more than 26 contacts and a minimum of one sealing plug up to $10 \%$ of the number of contacts. Spare Coax and Twinax contacts are not supplied. One insertion/removal tool for each contact size is also included.

Note 2: Proper part number marking has no " 0 " in front of single digit shell size (9) and no " 0 " in front of single digit layout. Example of each: J MS27466T9B35S and J MS27466T11B5S. In both, " $N$ " for normal is omitted. In addition, J or JAN must now be marked in front of the MS part number.

## Keying Positions

## Notes:

1. Mating face of receptacle shown (plug is opposite).
2. The master keyway (key) has various positions relative to DATUM $\mathbf{F}$; the minor keyways (keys) remain fixed as shown. In the Normal position, the master keyway (key) is at $95^{\circ}$ from DATUM $\mathbf{F}$.
3. The angles for a given connector are the same whether it contains pin or socket inserts.
4. The insert arrangement does not rotate relative to master keyway (key).

* Inactive for new design
** Insertion tool is not required.

Note 1: Test Current and Maximum Voltage Drop when tested with silver-plated wire at $25^{\circ} \mathrm{C}$.

Note 2: Size 12 coax contacts purchased in bulk.
Note 3: Size 8 coax contacts are used with M17/095-RG180 cable, while size 8 Twinax contacts are used with M17/176-00002 cable.
conesys

## Contact Installation Instructions

## Crimping Contacts

1. Select the appropriate crimp tool and ensure that the proper crimp head positioner is used.
2. Cycle the tool to be sure the indentors are open.
3. Determine the correct selector setting for the wire size from the data plate on the positioner (turret head assembly) and set the selector knob on the crimp tool to match.
4. Place the contact, mating end first, into the tool.
5. Insert the stripped wire into the hollow end of the contact. Be sure the wire is inserted as far as it will go.
6. Close the tool completely to crimp. Unless the tool is closed completely, the tool will not release the contact.
7. Remove the crimped contact from the tool. Check the inspection hole to verify that the wire is fully inserted.

## Insertion of Contacts

1. Before inserting the contacts, unscrew the accessories (clamps, backshells or adapters) from rear of plug or receptacle. Slide the hardware over the wire bundle in the proper order for reassembly after all the contacts are inserted.
2. To assist insertion of contacts, lubricate insulator (grommet) cavities with isopropyl alcohol. Alcohol will evaporate and will not leave a conductive film. Caution: Never use any lubricant other than isopropyl alcohol.
3. Place the correct insertion tool on the contact so that the wire runs along the groove in the tool. (Tool tip will butt against the shoulder.) Hold the plug or receptacle body firmly.
4. Beginning with a center cavity, insert the contact into the insulator with a slow, even pressure until the contact snaps into position. Make sure the contact and tool are held perpendicular to the face of the insert during the contact installation or the grommet could be damaged.
4.1 If contacts are not inserted all the way prior to removing insertion tool, do not try to reinsert the insertion tool. Instead, remove the contact and try again; otherwise reinserting the insertion tool may damage the inside of the contact cavity.
5. Remove tool and check the face of the connector for proper contact installation. Proper installation may also be checked by pulling back lightly on the wire to make sure the contact is properly seated.

## Completion

After all the cavities have been filled, slide the hardware back into position on the connector and tighten.

## Extraction of Contacts (Rework)

1. Slide the hardware back over the wire bundle.
2. Select the appropriate tool. Place the wire into the extraction tool of the pin or socket.
3. Slowly slide the extraction tool down wire into the contact cavities until the tool tip bottoms against the contact shoulder, expanding the clip retaining tines. Hold the wire firmly in the tool and pull the wired contact and tool straight out of the rear of the insulator.

Please see next page for Shell Sizes 21/20/G thru 25/24/J layouts.

* Not approved for new design. Tooled and qualified but their separate pictorials are not shown on pages 17 thru 19, as they are the same as corresponding (-35) layouts that take same qty of 22D instead of 22M contacts.

[^0]per MIL-STD-1560

* Not approved for new design. Tooled and qualified but their separate pictorials are not shown on pages 17 thru 19, as they are same as corresponding (-35) layouts that take same quantity of 22D instead of 22 M contacts.
** 21-48/G48 layout is not to MIL-STD-1560. It is tooled and intended for comm'l use only.
*** Not approved for new design. Pictorial is shown on page 18.
**** J46 in Series III is not QPL'd but can be purchased to comm'l number (Size 8 Coax contact must be used).
- above means "not available" for that series

Note 1: J20P uses 4 size 12 coax contacts as follows: 2 ea M39029/28-211 and 2 ea of M39029/102-558; J20S uses 4 size 12 coax contacts as follows: 2 ea M39029/75-416 and 2 ea of M39029/103-559.

Note 2: Layouts (G75, J8, J20, J46 and J90) that take twinax or coax contacts should not be used for firewall applications (Classes K \& S) in Series III.

Note 3: H and J contact styles (in lieu of P \& S) are meant for Composite (classes J \& M) Series III only. Aluminum (classes A, B, F \& W) and Firewall (classes K \& S) are rated for 500 cycles regardleess what contacts are used.
