BEACONS

Industrial Static Filament Beacons > SF201/200 Series Product overview

The SF201-200 Series is identical to Flashing Filament beacons with the exception that they do not operate through an On and Off cycle. When the unit is energised, the light source stays permanently 'On' - often referred to as steady mode. The main advantage of this type of beacon is that the light can

be controlled by a separate source, i.e. a control panel, giving the unit more flexibility. These units are available with either a filament or tungsten halogen lamp. The 201/200 Series uses a smooth outer lens. Low wattage models incorporate a Dioptic Fresnel internal lens to increase the light output. The use of the smooth outer lens makes cleaning of the unit easy and less likely to become ineffective due to a build-up of dirt.

Features

- Continuously rated
- Suitable for surface or wall mounting
