

**The E100S evaluation board** has been developed to show the capabilities of the QT100. The board demonstrates the chip in a typical application; a simple through-panel single-switch. The E100S illustrates how a QTouch solution requires only a very simple circuit design and a minimum of external components. See the downloads table below for a schematic diagram of the board.

The kit includes the board and 2 additional QT100 ICs.
