

# THE MOST VERSATILE SECURITY LIGHTING SYSTEM EVER

*CPC Security*

Securilite is an external security system utilising the latest Passive Infra Red Technology. It is designed for the needs of the professional installer and the requirements of the discerning user. The range incorporates a minimum mains feature. Only the control unit and the floodlights require a mains supply. The rest of the system is wired using a standard low voltage alarm cable, making the installation much safer and easier.

The system offers the user complete control of the external security system from a range of 'Command Centres', allowing operation of the lights and auxiliary equipment.

## VOLTEK

### SENSORS

12V operation with simple 4 wire connection  
LED indicator shows when movement is being detected.

Very high immunity against RFI, EMI and reflected sunlight.

The sensor can accurately set to 'watch' the desired area.

U/V stabilised to prevent premature ageing from sunlight.

High gain fresnel optics provide volumetric coverage of the detection area.

Robust and weatherproof enclosure.
