

Installation- / monitoring technique

Level sensing relay IL 9151, SL 9151, MK 9151N¹⁾ varimenter

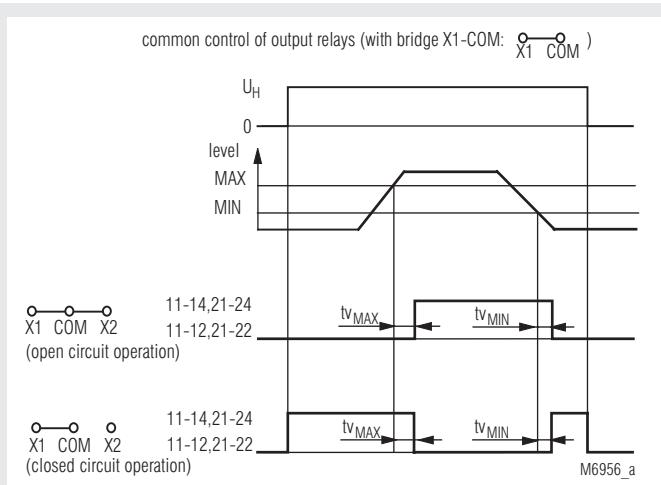

¹⁾ Replacement for MK 9151

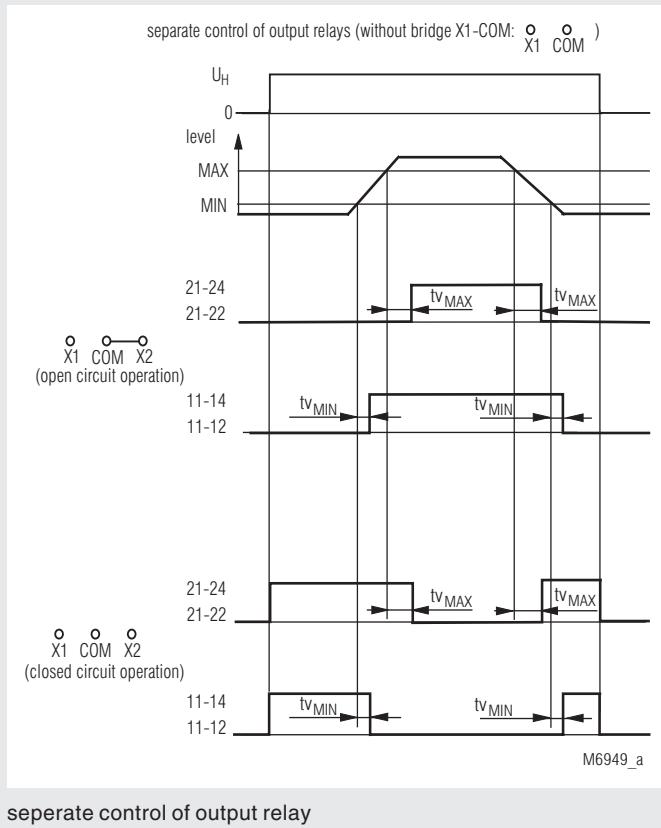

0225266

Function diagrams

common control of output relays

- According to IEC/EN 60 255, DIN VDE 0435-303

- Devices available in 3 enclosure versions:

IL 9151: depth 59 mm, with terminals at the bottom for installation systems and industrial distribution systems according to DIN 43 880

SL 9151,

MK 9151N: depth 98 mm, with terminals at the top for cabinets with mounting plate and cable duct

- 3 probe connections for 2-point and 1-point level control
- Also for use as moisture detector
- High interference resistance of the measuring circuit, which is isolated from the mains
- Max. wire length to the probes: 1500 m
- Large setting range: 2 ... 450 kΩ this permits differentiation between fluid and foam
- Separately adjustable response and release time delay 0,2 ... 20 s for MIN- and MAX-level
- Programmable for:
 - 2 separate controllable output relays for MIN and MAX level
 - common controlled output relays for 2-point hysteresis level control
 - open circuit operation
 - closed circuit operation
- Measuring circuit for probes works with internally generated AC voltage (approx. 30 Hz), electrolytic behaviour does not occur in the liquid
- For auxiliary voltages of 24 ... 415 V AC or 24 V DC
- LEDs for operation and state of contact
- 2 changeover relays with 1 changeover contact each
- IL9151 and SL9151 with safe separation according to IEC/EN 61 140, IEC/EN 60 947-1
- MK 9151N with safe separation on a request
- IL/SL 9151: 35 mm width
MK 9151N: 22,5 mm width

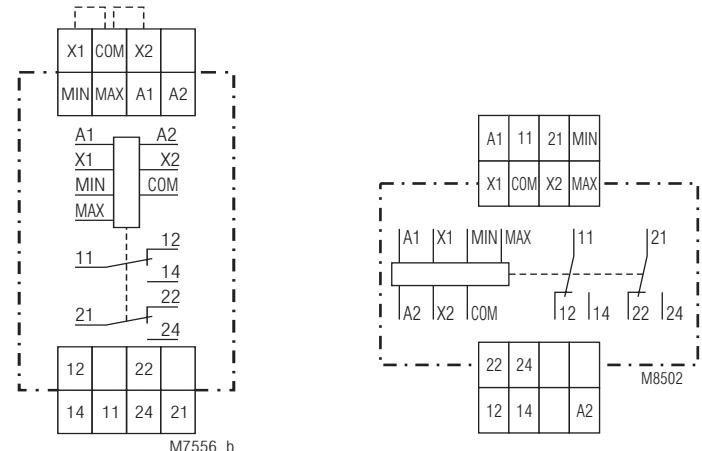

Approvals and marking

Application

- Level monitoring and control for conductive liquids and powders, e.g. maximum and minimum filling levels, overfilling and protection against dry running
- Monitoring and control of the mixing ratio of conductive liquids
- General resistance monitoring tasks, e.g. limit temperature detection with PTC
- Contact protection relay with time delay

Circuit diagram

Indicators	Technical data
IL/SL 9151 green LED: yellow LED: red LED:	Setting range of the fluid resistance: 2 ... 450 kΩ (response value) Setting: on logarithmically divided absolute scale Switching point hysteresis: approx. 4 % (at 450 kΩ) ... 15 % (at 2 kΩ) of the set value
MK 9151N green LED: yellow LED "MIN": red LED "MAX":	Voltage and temperature influence: < 2 % of the set value Max. cable length to the probes: Set value Cable length (at 100 nF/km) 450 kΩ 50 m 100 kΩ 200 m 35 kΩ 500 m 10 kΩ 1500 m 5 kΩ 3000 m
Notes	Max. sensing voltage: approx. AC 10 V (internally generated) Max. sensing current: approx. AC 1,5 mA (internally generated) Response and release times $t_{v_{\text{MIN}}}, t_{v_{\text{MAX}}}$: 0,2 ... 20 s for both output relays separate settable Setting on logarithmically-divided absolute scale
2-point level control The 2-point control is selected when a liquid should be kept between "MIN" and "MAX" level. 2 operation modes can be selected: without bridge X1 - COM: separate control of output relays for "MIN" and "MAX" level with bridge X1 - COM: common control of both output relays When the relays are separately controlled each output relay is operated by the corresponding probe circuit. For each level the time delay can be set separately ($t_{v_{\text{MIN}}}$ and $t_{v_{\text{MAX}}}$). When the relays are controlled together, these work like a relay with 2 changeover contacts as follows: If the liquid rises above the "MAX" level the output relays switch over after the delay time of $t_{v_{\text{MAX}}}$ and start e.g. a pump to sink the liquid. If the level goes under the "MAX" level the output relays remain activated until the "MIN" level is reached. Now the output relays switch back after the time delay of $t_{v_{\text{MIN}}}$ and stop the pump. The whole process starts again when the level reaches the "MAX" probe.	Auxiliary circuit Auxiliary voltage U_H: AC 24, 42, 110, 230 V DC 24 V Voltage range of U_H AC: 0,8 ... 1,1 U_N DC: 0,85 ... 1,25 U_N Nominal power consumption AC: approx. 2 VA DC: approx. 1 W Frequency range: 45 ... 400 Hz
1-point level control 1-point level control (see Figure) is especially suitable for protection against overfilling and dry running on containers with a free inlet/outlet. In this configuration, all that is required besides the reference probe "COM" is the "MAX", which must be located at the desired limit level. The output relay switches over after the set delay time if the fluid level exceeds or falls below the limit level, which permits fluid to be pumped out or added. Without bridge X1 - COM only relay "MAX" (contacts 21-22-24) switch, with bridge X1 - COM both relays switch together. If for each output relay a separate time delay is necessary, the unit has to be set to separate control of the outputs and the "MIN" and "MAX" inputs are connected to the same probe. Please note that the resistance of the liquid is divided up on both input circuits. Therefore the response value must be setted to the double value. If separate output control is selected with 1-point control for each output relay the time delay can be setted separately. Because of the settable time delay of 0,2 to 20 sec for each probe circuit, it is possible to suppress early switching caused by waves on the liquid. Also time depending level control can be realised. The delay works integrating and is active when the liquid goes over as well as under the probe level. The wide setting range allows easily an optimum setting so that the unit can differentiate between foam and liquid. The response value must be set to a value high enough, that the unit reacts when the liquid, but not when the foam reaches the probe (for setting procedure the time delay is set to min. value).	Output Contacts IL/SL 9151.12, MK 9151N.12: 2 x 1 changeover contact Thermal current I_{th}: 4 A Switching capacity IL/SL 9151: to AC 15 NO contact: 5 A / AC 230 V IEC/EN 60 947-5-1 NC contact: 2 A / AC 230 V IEC/EN 60 947-5-1 MK 9151N: to AC 15 NO contact: 3 A / AC 230 V IEC/EN 60 947-5-1 NC contact: 1 A / AC 230 V IEC/EN 60 947-5-1 to DC 13: 1 A / DC 24 V IEC/EN 60 947-5-1 Electrical life IL/SL 9151: IEC/EN 60 947-5-1 to AC 15 at 1 A, AC 230 V: 2 x 10 ⁵ switching cycles MK 9151N: IEC/EN 60 947-5-1 to AC 15 at 1 A, AC 230 V: 1,5 x 10 ⁵ switching cycles Short circuit strength max. fuse rating: 4 A gL IEC/EN 60 947-5-1 Mechanical life: ≥ 30 x 10 ⁶ switching cycles
General data	Operating mode: Continuous operation Temperature range: - 20 ... + 60°C Clearance and creepage distances overvoltage category / contamination level IEC 60 664-1 IL/SL 9151: input / auxiliary circuit: 6 kV / 2 (at U_H = DC 24 V: 1kV) input / output circuit: 6 kV / 2 MK 9151N: input / auxiliary circuit: 4 kV / 2 (at U_H = DC 24 V: 1 kV) input / output circuit: 4 kV / 2 auxiliary / output circuit A1-A2 (AC): 4 kV / 2

Standard type	Standard type
EMC	
Electrostatic discharge:	8 kV (air) IEC/EN 61 000-4-2
Fast transients:	2 kV IEC/EN 61 000-4-4
