The professional Real-Time In-Circuit-Emulator:

BICEPS

embetter 80C51 emulators

€ 498,-

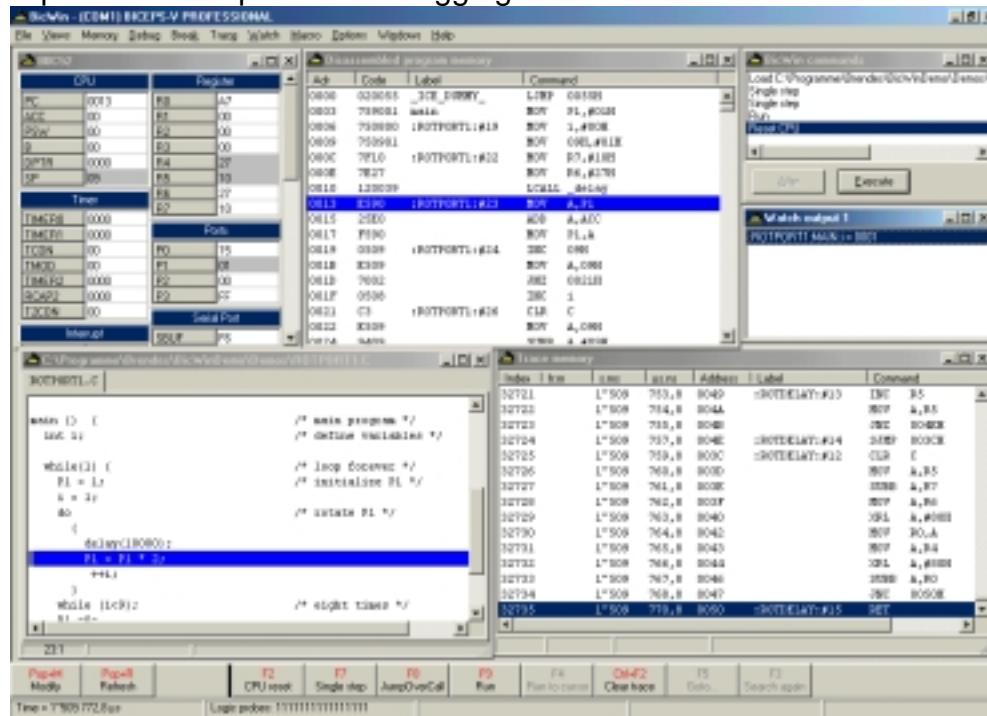

The real-time in-circuit-emulator **BICEPS-V** from Brendes is a complete and professional debugging solution for all microcontrollers of the 80C51 family. The **BICEPS-V** is the most universal emulator in the 80C51 market. Features and prices are very attractive for beginners and professional users.

embedder user interfaces

BicWin debugger or Keil µVision IDE

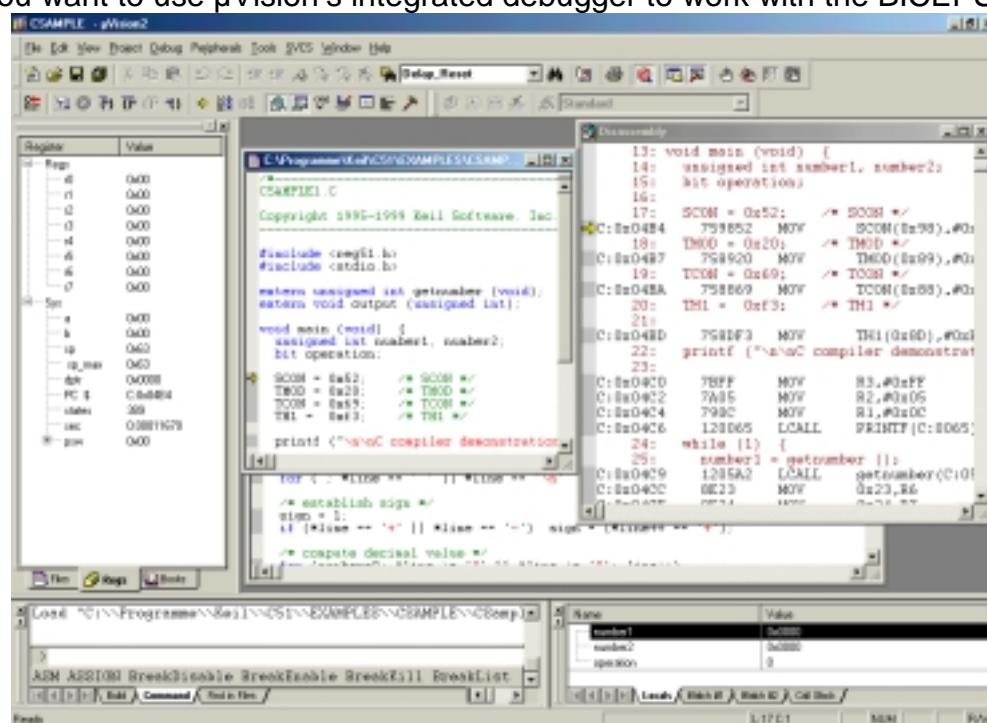

1. BicWin: the Brendes Sourcelevel Debugger

if you prefer an independent debugging software

2. Keil µVision: the Integrated Development Environment

if you want to use µVision's integrated debugger to work with the BICEPS emulator

embedder features

No other 80C51 emulator offers this benefits:

1. embedder controller spectrum

Support of all actual 80C51 flash derivates in true single chip mode

Allready the basic equipment can emulate all 80C51 compatible microcontrollers in true single chip applications without external bus –very important for the modern flash devices. Using the new **Softhook™** emulation technique (patented by Brendes), which needs no bondout CPUs or debug licenses, nearly all 80C51 compatible controllers of all silicon vendors can be emulated. For some 80C51 derivates the **BICEPS-V** emulator is the only emulator supporting this devices (see list of supported controllers).

2. embedder prices

Low price beginners version

Professional version can be activated immediately when needed

The **BICEPS-V** emulator comes completely equipped with all features at a very attractive low price. The **Basic Features** are available allways and include all standard debugging features like download, real-time program execution, sourcelevel debugging. For more complex problems the **Professional Features** (like real-time-trace, performance analysis etc.) can be activitated by software code when needed – unlimited or for a 3 month period.

And note as additional benefit: the first 8 weeks after delivery all **Professional Features** can be used without restrictions. This is enough time to realize a project or to get familiar with professional real-time debugging.

3. embedder connections

Besides the classic POD method, which replaces the CPU on the target board by an adapter, the **BICEPS-V** emulator offers debug connector and universal adapter connection:

- **POD**: connection via CPU socket
- **Universal adapter**: connection via socket of an external program memory if available, EPROM or PSD
- **Debug connector**: connection via pin header and flat ribbon cable

More technical information can be found at
www.brendes.de !

embetter options, it's your choice:

Basic Features or Professional Features

embetter Basic Features:

**Basic equipment for comfortable microcontroller debugging
offers more and better features than monitor programs or on-chip debuggers**

- Complete emulator with 64k emulation memory
- state of the art FPGA technology, e.g.
 - the hardware is configurated by download
 - new features and changes by update
- true single-chip emulation by Brendes-**Softhooks™**
- real-time program execution
- Access to all internal and external memories and registers
- no restrictions using memories, interrupts, UART etc.
- Program download
- Breakpoints on program and ExtData memory
- Software included:
 - Source level debugger **BicWin**

embetter Professional Features:

**Allways available, when needed for your project
Activation possible every time by software code**

- 32k x 96 Bit real-time-trace, 32 bit real-time clock, time stamp
- performance analysis
- real-time trace filter
- 32 bit real-time clock for time measurements, range 100ns .. 12h
- conditional and complex break events
- external inputs for break and trace purposes
- mapping
- 128k/512k emulation memory with banking support
- watchdog support
- Dallas80C390/80C400 paged/contiguous support
- activation by software code immediately when needed
- Software included:
 - Source level debugger **BicWin**
 - driver (DLL) for **Keil µVision-IDE**

embetter

Single chip emulation: SH = Softhook, BO = Bondout, HO = Hardware Hook

embetter**Prices**

All prices are netto prices in Euro without taxes and shipping costs.

embetter Emulator BICEPS-V Basic:Real-time in-circuit-emulator **BICEPS-V** for the microcontroller families 80C51/C500:

- 64k emulation memory
- True-single-chip emulation with Brendes-**Softhooks™**
- Breakpoints on program and extData memory
- **BicWin** Source-level-debugger for all Windows®-versions
- Serial and parallel interface, cables, power supply, online manual
- Includes **8 weeks** license for **Professional Features** (see Professional version)

€ 498,-

embetter Emulator BICEPS-V Professional:Real-time in-circuit-emulator **BICEPS-V** for the microcontroller families 80C51/C500:

like BASIC version, but additional

- 128k/512k emulation memory with **banking support**
- conditional break events
- **32k x 96 Bit real-time-trace memory**, 32 bit real-time clock for time measurements, performance analysis
- **16 external inputs** for break and trace purposes
- mapping, watchdog support
- Emulation Dallas 80C390 in paged/contiguous mode
- **DLL for Keil-μVision-IDE**

€ 1.998,-

embetter Professional license 3 months:**BICEPS-V Basic + 4 x Professional license = BICEPS-V Professional**

- Activation of the **Professional Features** for a period of **13 weeks**
- Software code for activation by email
- The 4. Professional license includes the final activation of the Professional features, i.e. the result is the property of an emulator **BICEPS-V PROFESSIONAL**

€ 420,-

embetter CPU adapters (PODs):

POD B51 (for all controllers in standard 40/44 pin package)	€ 100,-
POD B51-68 (Atmel 89C51RD2, 68 Pins)	€ 150,-
POD B390 (Dallas 80C390)	€ 300,-
POD B51CC (Atmel 89C51CC01/02/03, 89C51AC2, 89C5115)	€ 150,-
POD B5131USB (Atmel 89C5131) inkc. PLCC52-Converter	€ 200,-
POD B51LPC (Philips 87LPC76x)	€ 200,-
POD B517 (Infineon C517A, 80C537/517A)	€ 200,-
POD B520 (Dallas 87C520/530 Bondout)	€ 250,-
POD B552 (Philips 8xC552)	€ 150,-
POD B592 (Philips 8xC592)	€ 150,-
POD BuC8xx (Analog Devices ADuC812/16/24; includes QFP-Adapter and QFP-basis socket to solder on target board)	€ 400,-

embetter Options

Keil-μVision-DLL for BICEPS-V-Basic	€ 100,-
Keil-μVision-DLL for older BICEPS emulators (BICEPS-IV , BICEPS-V)	€ 300,-
Additional price for Emulation memory expansion to 512k (for banking applications)	€ 200,-

embedder adapters and converters:

U32 (BICEPS-V universal adapter)	€ 100,-
Debug connector	€ 100,-
Adapter cable A0A3 (passive, P0/P2 in Hardware-Hook-, Softhook- or Bus-Mode)	€ 100,-
Adapterkabel A1 (active, P0/P2 in bus mode only)	€ 150,-
Converter DIL40 (CD40), PLCC44 (CP44), PLCC32 (CP2832 , CP3232)	€ 70,-
Converter POD B51CC to 89C51CC02 or 89C5115 PLCC28 (CP4428)	€ 80,-
Converter PLCC68 (CP68), PLCC84 (CP84)	€ 90,-
Converter QFP44 (includes base socket for soldering on target board)	€ 300,-

Other adapters and converters: please ask

embedder Compilers:

Keil PK51 V7 C51 Professional Developer's Kit:

DK51 + Support for 80C51MX & 80C390, Extended Linker, TR51

€ 2600,-

Keil DK51 V7 C51 Developer's Kit Windows Version:

CA51 + µVision2 simulator and target debugger

€ 2300,-

Keil CA51 V7 C51 Compiler Kit:

A51 + C51 Compiler

€ 1600,-

Keil A51 V7 A51 Assembler Kit:

A51 Assembler, 8051 Utilities, uVision2 IDE

€ 350,-

All Keil products at original prices, other Keil products available, please ask
